

The main Frameworks included in the project: SHAFT Engine on the Top of:

--+> Selenium Java
--+> Maven
--+> TestNG
--+> Allure Report
--+> Extent Reports
--+> Project Design: Object Model design pattern
--+> Data Driven framework

How To Use this Project with High-level Framework:

- You can use it with any IDE like ==> EX: IntelliJ IDE If you are going to use IntelliJ You Should First follow these steps :
- IntelliJ: As of SHAFT_Engine you can now use IntelliJ and Eclipse to manage your test project.
- After checking out the project to your IntelliJ you may face an exception that prevents test execution IF the Project not working.
- In that case, you must add the SHAFT_Engine custom listeners to your TestNG execution template, as IntelliJ doesn't natively inherit this list from the pom.xml file.

Listeners:

com.shaft.listeners.TestNGListener
